SUMMARY

Aspiring DevSecOps Engineer and student at the University of Makati, passionate about automating workflows and pipelines to cut out repetitive manual work and let teams ship faster without sacrificing security.

EDUCATION

University of Makati	Expected 2027
<i>Bachelor of Science in Information Technology</i>	

EXPERIENCE

Tutorials Dojo - fundr studios	2026 - Present
<i>Full-Stack Developer Intern</i>	
Philippines	
• (Desku) - Led development of a local-first productivity app for virtual assistants to manage clients, shifts, tasks, income, and invoices (React Native, Expo, SQLite); architected offline-first, account-free storage with device-bound identity, subscription tiers via RevenueCat, and on-device CSV backup and invoice/report PDF generation. • (Inki) - Co-developed building a privacy-first reading and book-tracking app (React Native, SQLite) that reached #1 in the Books category on the Philippine App Store (5.0 rating); architected offline-first, account-free storage with barcode/ISBN scanning, OCR quote capture, and author/genre-based recommendations.	
iSkolar	2026 - Present
<i>DevOps Engineer</i>	
Philippines	
• Handling CI/CD pipeline automation build, test, and deployment workflows; security gates for status checks and error handling; tracking system for tasks and pipeline status • Handling iSkolar-Academy development and production builds — React/TanStack frontend, Hono/Node API, multi-stage Docker deployment.	

PROJECTS

SecureFlow: Hybrid ISMS Document Management Architecture	April 2026
<i>Systems Architect & DevOps Engineer</i>	
• Designed and built ISO 27001-aligned DMS (Next.js, FastAPI, Supabase) with versioning, multi-step approvals, and classification-based RBAC. • Secured with Google OAuth (domain-locked) + TOTP MFA enforced at middleware. • Containerized with Docker Compose behind IIS on Windows Server; automated firewall changes and Active Directory sync via Ansible + WinRM.	
GabayTek: A Structured Course Platform Enhanced by AI-Learning Assistant	December 2025
<i>Full-Stack Developer & AI Engineer</i>	
• Built cross-platform Electron + React desktop app with a bundled Flask backend; designed dual auth (local JWT + Supabase OAuth) and RBAC. • Built AI recommendation and learning-style assessment endpoints (Gemini 2.5 Pro). • Automated build/release: PyInstaller backend packaging, electron-builder multi-OS installers, and electron-updater auto-updates.	

CERTIFICATIONS

Oracle Cloud Infrastructure 2025 Certified Developer Professional	August 2025
